Hi! I'd like a sequence search performed for case 10/086,177:

- 1. the amino acid sequence of SEQ ID NO: 12
- 2. the amino acid sequence of SEQ ID NO: 13

Thanks!

Bridget Bunner

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           BB BB

Patent No. 6613742

GENERAL INFORMATION:

APPLICANT: Huang, Ziwei
APPLICANT: Luo, Zhaowen
APPLICANT: Luo, Jansong
APPLICANT: Luo, Jansong
FITILE OF INVENTION: Chemokine-Derived Synthetic Peptides
FILE REFERENCE: 8321-40

CURRENT APPLICATION NUMBER: US/09/543,940

CURRENT FILING DATE: 2000-04-06

PRIOR APPLICATION NUMBER: 60/128,106

PRIOR APPLICATION NUMBER: 60/128,106

PRIOR APPLICATION NUMBER: 50074848

PRIOR APPLICATION NUMBER: 50074848

SOFTWARE: Patentin Ver. 2.1

LOCATION: (24)..(28)

COTHER INFORMATION: Cyclized, for example glutamate (E) and lysine (K)

OTHER INFORMATION: residues may be joined by side chain cyclization

OTHER INFORMATION: using a lactam formation procedure.

OTHER INFORMATION: Synthesised in Laboratory:

```
reduced chemoattractant active on T-lymphocytes, monocytes, but not neutrophils. SDF-1-beta(3-72) and SDF-1-alpha(3-67) show a reduced chemotactic activity. Binding to cell surface proteoglycans seems to inhibit formation of SDF-1-alpha(3-67) and thus to preserve activity on local sites.

-!- SUBCELLULAR LOCATION: Secreted.
-!- ALTERNATIVE PRODUCTS:

Event=Alternative splicing; Named isoforms=2;

Name=Beta; Synonyms=SDF-1-beta(1-72);

IsoId=P48061-1; Sequence=Displayed;

Name=Alpha; Synonyms=SDF-1-alpha(1-68);

IsoId=P48061-2; Sequence=VSP 001056;

PTM: Processed forms SDF-1beta(3-72) and SDF-1alpha(3-67) are produced after secretion by proteolytic cleavage of isoforms Beta and Alpha, respectively. The N-terminal processing is probably achieved by DPP4. Isoform Alpha is first cleaved at the C-terminus. The C-terminal processing of isoform Alpha is reduced by binding to heparin and, probably, cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          coreceptor.";
